

Making Dream Surfaces Attainable

Premium Sinks by MSI

CARE & MAINTENANCE

Our stainless steel sinks are made of 304 series, 18/10 chrome/nickel steel. This non-magnetic, non-porous material is very hygienic, extremely durable, and rust free. Our stainless steel sinks maintain lustrous finish that is resistant to water stains and calcium deposits.

As with any household items, stainless steel sinks require periodic cleaning to maintain the original beauty.

Care & Cleaning

- Rinse often and thoroughly
- Wipe sink dry with a soft, clean cloth. Depending on water hardness, spotting and mineral deposits will occur with air drying
- Feel free to use mild stainless steel cleaner to aid in the cleaning process
 - Recommended products include Flitz, Barkeeper's Friend, Gordon's Miracle Shine
- Fine scratches will occur in stainless steel with normal use. This is perfectly normal and should be expected. You can buff out minor scratches with soft-bristled brush and metal polish.
- **Do Not**
 - Do not use abrasive cleaners such as scrub pads or steel wool. They will scratch and dull the finish
 - Do not let aggressive cleaning agents such as bleach or acid sit in your sink for prolonged periods of time. This may permanently alter the finish of the sink. Always rinse the sink thoroughly after using aggressive cleaning agents
