

From MSI

Paver Pedestal Installation Requirements

Arterra Pavers can be installed on a raised pedestal installation. This installation option is beneficial for installations where you need to run cabling or piping under the pavers or on a roof top to create a deck without affecting the waterproofing of the roof.

Installation should be completed in accordance with the pedestal manufacturer's instructions with an additional requirement. To ensure even load distribution and safety, MSI requires the positioning of a pedestal underneath the center of each paver. The spacer fins should be removed from the top of the pedestal.
