

Features & Benefits of Porcelain Panels

MSI Porcelain Panels are suitable for virtually every interior and exterior design project for wall and floor applications. Lighter weight than your typical 2CM or 3CM natural stone or quartz slabs, these panels are highly durable and require less maintenance. Create a beautiful new look for a fraction of the cost and time associated with buying, fabricating, and installing natural stone slabs and tile.

If your home or commercial property needs a cost-effective way to spruce up walls, showers, flooring, or any other surface – porcelain panels provide the perfect solution. They are significantly easier to cut and install than your standard stone or quartz, which requires fabrication. These panels can be cut to size at a job site and can be moved into a tight position while larger slabs can't.

Available in two nominal sizes, 32x64 and 32x96, each set comes with 4-panel faces. Glacier Pearl, Glacier Statuary, Montblanc Statuario, and Quebec Onyx make up the Porcelain Panel Collection. With these large format gauged porcelain slabs, you can create a near seamless appearance that promotes a sense of overall elegance.
